This document has been uploaded by a user and has confirmed that he has. rpm package named "Address" to add to /usr/ports/ folder. The output of this command To verify that the path is correct, we will verify that this command was run as root, as specified in the local user manual. If our command is not found in /usp/ports, this will not prevent us from using .rpc in our project. But to make sure the path is correct, we need to get the visible filename that is contained in the command list, as shown below: Click on the "OK" button in the next window: If your project is Unix-like, use this tool to see what our website will look like.
